WORDPRESS & SEO COURSE — LIVE PROJECT HANDWRITTEN NOTES

Student Reference Guide: Learn WordPress Development & On-Page/Technical SEO Using 4 Real-World Live Projects

Quick Index **Course Practical Goal:** By clicking and analyzing the four live reference links below, students will learn how to rebuild projects across four major industries (Personal Portfolio, Fitness Utility Tool, Image SEO Optimizer, and Local E-Commerce) inside WordPress and apply proven SEO strategies to rank on the first page of Google.

Project Name	Clickable Live Reference Link	Website Category	Core Course Learning
1. Raju Sharma Portfolio	https://rajusharma-omega.vercel.app/	Personal Branding & Service Agency Site	Portfolio Layout, Service Pages & Personal SEO
2. GymFitForce / FitForge	https://gymfitforcel.vercel.app/	Fitness Platform & Health Calculators	Interactive Tools (BMI/BMR), Programmatic SEO
3. PixelShift KB Tool	https://pixelshiftkb.blogspot.com/	WebP Image Converter & Compressor	Core Web Vitals, Image SEO & Tool Blogging
4. Banarasi Dairy Live	https://banarasidairylive.vercel.app/	Local Dairy Brand & Product Ordering	WooCommerce Setup, Local SEO & GMB Ranking

Project 1: Personal Portfolio & Freelance Service Website

Live Reference Link: https://rajusharma-omega.vercel.app/

A. Website Structure Analysis (Key Highlights of This Project)

- **Hero Section (First Impression):** Displays a clear value proposition—*"I build modern websites that look great, perform fast, and get discovered"* paired with two focused Call-To-Action (CTA) buttons: **View My Projects** and **Download CV**.
- **Trust & Experience Section:** Highlights verified work experience at NSMedia (Web Developer Intern - 9 Months) using action-driven bullet points (WordPress CMS, On-Page SEO, Meta Tags, Internal Linking, Alt Text).
- **Selected Projects & Services Grid:** Showcases 6 core service offerings (WordPress Development, Website Development, SEO Optimization, Maintenance, Responsive UI, Technical SEO) cleanly numbered from 01 to 06.

- **Integrated Learning Blog:** Features educational blog cards directly on the homepage covering *WordPress Learning Guide*, *SEO Basics*, and *MERN Stack Roadmap*.

B. How to Build This in WordPress (Student Implementation Guide)

- **Recommended Theme:** Use **Astra**, **GeneratePress**, or **Kadence** (Lightweight themes ideal for achieving a 95+ PageSpeed score).
- **Page Builder & Plugins:** Build the Hero banner, skill badges, and project cards using *Elementor Free* or *Spectra (Gutenberg Blocks)*. Add a lead capture form using **WPForms** or **Contact Form 7**.
- **Custom Post Types (CPT):** Instead of hardcoding project cards manually every time, create a dedicated *"Projects"* Custom Post Type or blog category in WordPress.

C. SEO Course Practical Tasks (What to Learn from Project 1)

- **Target Keywords:** *"WordPress Developer in Vasai Mumbai"*, *"Freelance Web Developer & SEO Specialist"*.
- **Heading Hierarchy (H1 to H3):** Maintain strictly one `<h1>` tag per page (containing your name + primary skill), place all section titles (About, Experience, Services) inside `<h2>` tags, and wrap individual project titles in `<h3>` tags.
- **Person & Service Schema Markup:** Configure **Person Schema** via *Rank Math* or *Yoast SEO* so Google Search understands your name, location (Vasai, Mumbai), and social profiles (GitHub, LinkedIn, Fiverr).

Project 2: GymFitForce / FitForge — Fitness & Health Calculator Site

Live Reference Link: https://gymfitforcel.vercel.app/

A. Website Concept & User Engagement Strategy

- Rather than a static gym brochure site, this is a **Utility-Driven Fitness Platform** featuring interactive **BMI Calculator, BMR Calculator, and TDEE Calculator** tools alongside workout guides and progress trackers.
- **SEO Golden Secret (Tool-Based Traffic):** Offering free interactive calculators keeps visitors engaged on your page for 3 to 5 minutes. This dramatically **increases Dwell Time** and **reduces Bounce Rate**, sending strong positive ranking signals to Google!

B. WordPress + SEO Execution Plan (Student Practice)

- **How to Add Calculators in WordPress:** Install the *Calculated Fields Form* plugin or embed a lightweight JavaScript snippet inside a Gutenberg *Custom HTML Block* to create your own interactive BMI/BMR calculator.
- **Topic Cluster & Internal Linking Strategy:**
  - **Pillar Page (Main Tool):** *BMI & TDEE Calculator Page*.
  - **Supporting Blog Posts:** Publish articles such as *"How to Reduce BMI Naturally"*, *"Best High-Protein Diet Chart for Muscle Gain"*, and *"Home Workout Routine for Beginners"*, then add contextual **Internal Links** pointing back to your main calculator page.
- **Lead Generation Idea:** Add a *"Get Your Free 7-Day Diet PDF"* email opt-in box below the calculator results to convert visitors into paying gym members or online coaching clients.

Project 3: PixelShift KB — Image Optimization & WebP Tool

Live Reference Link: https://pixelshiftkb.blogspot.com/

A. Live Technical Audit (Key Takeaways from This Project)

- **Core Functionality:** A browser-based Free Image Converter, Compressor, and Resizer that processes **JPG, PNG, and WEBP** files client-side (e.g., *Compress Image to 100KB / 200KB*) with zero server uploads.
- **On-Page SEO Tags (Live Code Inspection):** Inspecting the HTML source code of this project reveals clean Technical SEO implementation:
  - **Meta Description:** *"Convert, compress & resize JPG, PNG and WEBP images free in your browser. No upload, no signup..."* (Kept under 155 characters with clear user benefit).
  - **Canonical Tag:** Proper use of `rel="canonical"` to prevent duplicate URL indexing issues.
  - **Open Graph (og:image & og:title):** Custom 1200x630 social preview banners configured for high click-through rates when shared on WhatsApp, LinkedIn, or X.

B. Dual Use of This Project in Your WordPress & SEO Course

1. **Use 1 — Speeding Up Your Own WordPress Sites (Image SEO Practice):**
   - Before uploading any image to WordPress, students should open the **PixelShift Tool**.
   - Convert heavy 2MB PNG/JPG photos into next-gen **WebP format** and compress them to **under 100KB**.
   - Rename files using SEO-friendly slugs (e.g., use `best-convert-jpg-to-webp-wordpress.webp` instead of `IMG_0023.jpg`) and add descriptive **Alt Text** inside the WordPress Media Library. This directly improves *Largest Contentful Paint (LCP)* scores!

2. **Use 2 — Micro-Niche Tool Blog Case Study:**
    - Observe how targeted Long-Tail Keyword blog posts are published below the main utility tool: *"Increase Image Size to 100KB Online"*, *"Compress JPEG to 200KB Online Free"*, and *"Best Convert JPG to WebP for WordPress"*. This is a textbook example of **Micro-Niche SEO**.

Project 4: Banarasi Dairy Live — Local Business & E-Commerce

Live Reference Link: https://banarasidairylive.vercel.app/

A. Local Brand & Direct-to-Consumer (D2C) Model

- This project demonstrates how to bring a traditional local dairy brand (Fresh Milk, Desi Ghee, Paneer, Lassi, Sweets) online with a clean, trustworthy storefront.
- It focuses on high-conversion local features: an easy-to-browse **Product Catalog, Daily Subscription/Ordering options, Purity Guarantee badges**, and instant **WhatsApp Direct Ordering**.

B. WordPress (WooCommerce) & Local SEO Blueprint

- **WordPress + WooCommerce Setup:**
    - Install the **WooCommerce Plugin** in WordPress and create dedicated product pages for each item (e.g., *Pure A2 Cow Ghee - 1 Litre*, *Fresh Malai Paneer - 500g*).
    - **Click-to-WhatsApp Order:** Since local customers prefer quick ordering over long checkout forms, integrate *Joinchat* or *Order on WhatsApp for WooCommerce*.
- **Local SEO Mastery (How to Rank #1 in Your City):**
    - **Google Business Profile (GMB):** Maintain strict **NAP Consistency** (Name, Address, Phone Number) and accurate opening hours across your website footer and Google Maps profile.
    - **Local Keywords:** Include city and neighborhood modifiers in your Product Titles and H2 headings—such as *"Fresh Pure Dairy Products & Desi Ghee Home Delivery in [Your City]"*.
    - **Product & LocalBusiness Schema:** Implement structured data for **Price, Availability (In Stock), and Customer Star Ratings (4.9★)** so rich snippets appear in Google Search results.

Master Comparison: 4 Projects = Complete WordPress + SEO Portfolio

By studying and recreating these four reference websites during the course, students build a complete, job-ready 360-degree practical portfolio:

Skill Area	Project 1 (Raju Portfolio)	Project 2 (GymFitForce)	Project 3 (PixelShift KB)	Project 4 (Banarasi Dairy)
WordPress Skill	Personal Site, Resume Download & Contact Form	Fitness Theme, Custom Calculator & Membership	Tool Integration, Fast UI & Blog Grid Layout	WooCommerce Store, Cart & WhatsApp Ordering
Primary SEO Type	Personal Branding & Service Page SEO	Content Marketing & Calculator Backlink Magnet	Technical SEO, Core Web Vitals & Micro-Niche SEO	Local SEO, Google Map Pack & E-Commerce SEO
Main Keyword Intent	Service Intent (*Hire WordPress Developer*)	Informational + Tool Intent (*BMI Calculator Online*)	Utility Intent (*Compress Image to 100KB WebP*)	Transactional + Local (*Buy Fresh Paneer Near Me*)
Schema Markup	`Person` & `ProfessionalService`	`SoftwareApplication` & `FAQPage`	`WebApplication` & `HowTo` Schema	`LocalBusiness` & `Product` Schema

10-Point Practical Assignment Checklist (Student Course Homework)

1. Open the **Raju Sharma Portfolio**, study its **Home, About, Experience, Skills, Projects, Services, and Blog** sections, and build your own personal portfolio site in WordPress.
2. Write and publish at least 3 educational blog posts on your portfolio (e.g., WordPress Guide, SEO Guide, Tech Roadmap) and connect them using contextual **Internal Links**.
3. Visit the **PixelShift KB Tool** to convert all website images into **WebP format** and compress each file below 100KB before uploading to WordPress.
4. Add keyword-rich, **Descriptive Alt Text** to every image (e.g., `alt="WordPress SEO Optimization Dashboard"`).
5. Using **GymFitForce** as a reference, embed an interactive **BMI or Calorie Calculator** on a WordPress page and write an 800-word SEO-optimized guide below it.
6. Referencing **Banarasi Dairy Live**, set up WooCommerce with 5 local dairy products (Milk, Ghee, Paneer, Curd, Sweets) complete with optimized **SEO Titles, URL Slugs, and Meta Descriptions**.
7. Configure *Rank Math* or *Yoast SEO* to generate an **XML Sitemap** and a clean `robots.txt` file for your project.
8. Perform a complete **Mobile Responsiveness Test** across mobile, tablet, and desktop viewports to verify tap targets and font legibility.
9. Audit all four reference URLs and your own WordPress site in Google PageSpeed Insights to analyze **Core Web Vitals (LCP, INP, CLS)**.
10. Connect your WordPress site to **Google Search Console** and **Google Analytics (GA4)**, then submit your sitemap and request URL indexing.
